

The NORTEC Difference

Flip-Up Gauge Wheels: This industry changing feature provides the productivity and performance landscapers want and need. Makes for easier storage and trailer hauling. Also, the gauge wheels in the up position puts the Piranha in the tilling mode. Don't be without this very important feature!

Rotor Options: Not all landscaping conditions are the same; not all landscaping needs are the same. NORTEC offers the rotor that's right for you - 2" Sabre tooth, carbide button tooth, carbide aggressor tooth, construction rotor and rotary broom. *Don't settle for a company that offers only one rotor. Pick the rotor that's right for you!*

Adjustable Material Bar: This important feature lets you make the correct adjustment for processing material. Adjust for changing soil conditions and operator preference. Different processing settings for sod, processed soil, dirt clumps and rocks. *Don't be locked into a one dimensional machine. Be adjustable!*

Material Side Shields: The X-Series offers quick-flip side shields. Remove a pin and flip up the side shield. Simple as one-two-three! The PT & PS offer a 4-position, high capacity, adjustable material side shields with an anti-blow out bumper bar. **NO TOOLS NEEDED** to make an on the jobsite adjustment!

Manual or Hydraulic Angle: You may choose either manual or hydraulic angle. Tractors are operated off the rear SCV. Skid steers feature an electric solenoid, which directs hydraulic oil off the main hydraulic drive to turn the angle cylinder. Hydraulic angle not available on PXT & PXS models.

Extender Fore & Aft Gauge Wheel Adjustment

NO TOOLS NEEDED to make an on the jobsite adjustment! Adjust your PIRANHA gauge wheels to either the "in" or "out" position for jobsite conditions or operator preference. This is a very important feature on skid steer models to prevent wheel damage! Not available on TX or SX series.

What it does

PIRANHA is a piece of equipment to make landscaping quick and easy. The rotor turns in a counter rotating motion, putting rock and debris between the end shields while processing the dirt through the machine, leaving an excellently prepared seed bed. Operating the PIRANHA with the gauge wheels down puts the PIRANHA in the landscaping mode. Operating the PIRANHA with the gauge wheels in the up position puts the machine in the tilling mode. Flip up the end shields and angle the PIRANHA to windrow rock and debris either by manual or hydraulic turn. PIRANHA features a float or rigid center link control as standard equipment on tractor models. The float setting is used for consistent rotor to ground engagement and the rigid setting is used for grinding.

Manufacturers of: Rockpickers, Silage Facers, Sno-Tec Snow Pushers, Grading & Packing Equipment, Piranha Landscape Rakes.
