### The **NORTEC** Difference!

#### Tilt & Trim

8 Foot Moldboard

Easy To Use Controls

Lift Hook

#### Fits Into A Standard Pickup Truck

No extra trailer spaceneeded. Going to the job site? No need to hook on the trailer, fits in the box of a standard pickup truck. Rental yard customers love this exclusive design. Rent & Go! May be easily loaded into the pickup truck bed while still attached to the skid steer.

## Jaser Compatible

The NORTEC receivers work with rotating lasers. The laser provides a reference plane of laser light over the jobsite. The Laser is mounted above the machine's cutting edge on grading equipment. The receiver is initially set on-grade to a known desired elevation or benchmark. As the machine is used and the blade is moved, the operator is given a visual indication of which direction to move the blade or bucket to get to on-grade, effectively checking grade from the cab.

Remote hydraulic operation. Attach, hook up the auxiliary hydraulic lines and you're ready to grade.

Cylinders tucked in for excellent visibility.

Performance Through Design

The blade is being pulled like a motorgrader.

Blade is approximately 8 to 12 inches past the edge of the skid steer tires, giving the operator more room to swing out away from buildings.

25 Degree moldboard rotation left and right.

Built in lifting hook is standard equipment.

Floating gauge wheels for excellent ground contact. Extra heavy duty front beam.

Forward design ball and socket allows maximum blade maneuverability.

Contoured blade for excellent material rolling action. Reversible cutting edge, doubles your cutter blade life. Grader blade material for long wear life.

Exclusive "Box" moldboard support system. Construction achieves greater strength through placement of bends in metal.

SPP

Heavy Duty Skid Steer mounting, built for industrial use.

Steel Frame

# Shear Pin Protection

Protects the hydraulic turn cylinder from damage due to sudden high impacts that could damage hydraulic cylinder or moldboard
